

GLOBAL CX TRANSFORMATION

# The NajdCommerce Blueprint

Precision Automation for Saudi E-commerce Excellence

---

CLIENT

**NajdCommerce (Saudi E-commerce)**

February 2026

# Executive Summary

This document presents a comprehensive technical and customer experience (CX) architecture for implementing HubSpot Service Hub Enterprise at NajdCommerce, a rapidly growing Saudi e-commerce company. The solution addresses critical operational challenges including fragmented customer communication, inconsistent service delivery, and lack of performance metrics.

## The Challenge: Business Leakage

NajdCommerce's support team manages inquiries across disconnected channels (WhatsApp, email, social media), resulting in operational inefficiencies and customer frustration. The current state reveals significant business leakage:

| Metric            | Current State | Business Impact                    |
|-------------------|---------------|------------------------------------|
| Missed Tickets    | 15-20%        | Revenue loss + reputation damage   |
| First Response    | 8-12 hours    | Customer churn + negative reviews  |
| Resolution Time   | 3-5 days      | Repeat contacts + agent burnout    |
| CSAT Score        | ~65%          | Below industry standard (80%+)     |
| Return Processing | 7-10 days     | Cash flow impact + dissatisfaction |

*Current State Performance Metrics*

## The Solution: Unified Intelligence

A strategic Service Hub Enterprise implementation featuring six integrated pillars that transform customer support from a cost center to a competitive advantage. This architecture delivers immediate operational improvements while building a scalable foundation for growth.

# The 6-Pillar Technical Solution

*Integrated E-commerce Ecosystem Architecture*

## Unified Ticketing

Multi-channel inbox with automated routing  
(Arabic/English/VIP)

## Custom Data Architecture

Order & Return objects for contextual support

## Real-Time Integrations

Salla/Zid, SMSA/Aramex, HyperPay/Moyasar sync

## Self-Service Portal

SSO customer portal (60% ticket deflection)

## Closed-Loop Feedback

CSAT/NPS/CES with detractor recovery

## Saudi Optimization

Bilingual, city-based SLAs, Ramadan capacity

## Custom Objects Schema

Two custom objects separate transactional data from contacts for scalability and analytics. The `order_details` object centralizes e-commerce order data with properties including `order_id`, platform (Salla, Zid, Shopify), `order_value`, payment status, delivery city, and VIP customer flagging. The `return_requests` object tracks product returns with warehouse integration for seamless refund processing.

## API Integration Architecture

Bidirectional sync between HubSpot and external systems using webhook-driven serverless functions enables real-time order visibility in ticket context, automated ticket creation for high-value orders, 40% reduction in WISMO (Where Is My Order) tickets, and agent productivity boost via instant data access.

# Saudi Market Competitive Edge

The NajdCommerce solution is specifically architected for the unique demands of the Saudi Arabian market, combining cultural sensitivity with operational excellence.

*This architecture bridges the gap between global automation standards and Saudi cultural nuances, turning every support interaction into a loyalty-building moment.*

## Bilingual Experience

All touchpoints (portal, emails, chatbot, knowledge base) are fully bilingual in Arabic and English with automatic language detection. Right-to-left (RTL) text direction support ensures native Arabic user experience.

## Prayer Time Awareness

Survey delivery respects Fajr-Isha prayer windows, with peak engagement hours scheduled post-Iftar during Ramadan. This cultural sensitivity drives higher response rates and customer satisfaction.

## Geographic SLA Tiers

| Geographic Tier          | First Response SLA |
|--------------------------|--------------------|
| Riyadh / Jeddah / Dammam | 2 hours            |
| Secondary Cities         | 4 hours            |
| Remote Areas             | 8 hours            |

*Geographic Service Level Agreements*

## Seasonal Surge Capability

Ramadan drives 3x capacity requirements. The solution includes pre-provisioned agents, overflow routing, and automatic scaling to handle peak volumes without service degradation.

## Local Payment Integration

Native support for HyperPay, Moyasar, Tabby (BNPL), and Cash on Delivery (COD) with automated refund workflows ensures seamless financial operations aligned with local preferences.

# Operational Scalability

*The CX Command Center - Future State Operations*

## Serverless Routing Architecture

The advanced ticket router auto-scales to handle 500+ tickets per hour during peak periods. The serverless architecture dynamically assigns tickets based on language (Arabic/English), VIP status, and team capacity with intelligent overflow management.

## Database Indexing & Performance

Optimized indexes on `order_details` (`order_id`, `delivery_city`, `is_vip_customer`, `order_status`) and `return_requests` ensure sub-500ms ticket creation including associations. Redis caching for frequent access data delivers <1.5s portal response times.

## Performance Benchmarks

| Metric               | Target                          |
|----------------------|---------------------------------|
| Ticket Creation      | <500ms (including associations) |
| Serverless Execution | <2s (routing + assignment)      |
| API Rate Compliance  | 100 req/10s (HubSpot limit)     |
| Concurrent Handling  | 500+ tickets/hour peaks         |
| Portal Response      | <1.5s (cached data)             |

# Strategic Impact & ROI

Growth & Efficiency Trajectory

## Performance Transformation

| Metric              | Before     | After     | Improvement     |
|---------------------|------------|-----------|-----------------|
| First Response Time | 8-12 hours | <2 hours  | > 75%           |
| Ticket Resolution   | 3-5 days   | <24 hours | > 80%           |
| CSAT Score          | ~65%       | >85%      | +20 points      |
| Missed Tickets      | 15-20%     | <2%       | ~ 90% Reduction |
| Return Processing   | 7-10 days  | <48 hours | > 83%           |
| Agent Productivity  | Baseline   | +40%      | New             |
| Cost Per Ticket     | Baseline   | -35%      | ~ 35%           |

3-Month Post-Launch Performance Metrics

90%

- Customer LTV: +18% (better experience drives retention)
- Peak capacity: 3x Ramadan volume, no headcount increase
- Return fraud: -12% (inspection workflow + image requirements)
- Agent turnover: -25% (better tools reduce burnout)

### **Qualitative Benefits:**

- Enhanced brand perception in competitive Saudi market
- Data-driven decision making through CX analytics
- Scalable foundation for multi-country expansion
- Competitive differentiation via bilingual self-service

# The Roadmap

A structured 12-week implementation timeline ensures systematic delivery with minimal business disruption.

| Phase              | Duration    | Key Deliverables                         | Resources            |
|--------------------|-------------|------------------------------------------|----------------------|
| 1. Foundation      | Weeks 1-2   | Pipelines, KB, Custom Objects, Dev Setup | Admin + Developer    |
| 2. API Integration | Weeks 3-4   | Salla/Zid, Shipping, Payments, Testing   | Developer + QA       |
| 3. Customer Portal | Weeks 5-6   | Portal Build, SSO, Mobile Optimization   | Developer + Designer |
| 4. Automation      | Weeks 7-8   | Workflows, Chatbot, Routing, Webhooks    | Admin + Developer    |
| 5. Feedback        | Weeks 9-10  | Dashboards, Closed-Loop, Performance     | Admin + Analyst      |
| 6. Launch          | Weeks 11-12 | UAT, Training, Go-Live, Hypercare        | All Team             |

## 12-Week Implementation Timeline

### Critical Path Items

- Custom Objects (order\_details + return\_requests) creation
- Salla/Zid webhook receivers operational
- SSO authentication bridge tested and secure
- SLA automation + routing workflows live
- Load test: 500 tickets/hour sustained
- Agent training completed and certified

### Success Criteria (30 Days Post-Launch)

- 90%+ tickets meeting SLA targets
- 40%+ portal adoption rate
- CSAT >= 80% (trending toward 85%)
- Zero critical system outages
- Agent satisfaction >= 4/5 with new system
